

## Product Info Sheet

# CineStill D96 B&W Developer

### Product Title

CineStill D96 B&W Motion Picture Developer, Powder Concentrate

### EAN

D96-1000ml

### Product Description

Sophisticated developing with motion picture quality. The D96 formula is trusted by cinematographers and motion picture labs due its dynamic S-curve contrast and forgiving highlight control. For the first time ever, available in accessible powder format!

The D96 formula is the specified developer for classic b&w motion picture stocks such as BwXX (Double-X), Ferrania P30, Lomography (Orwo), etc... It also works great with modern T-grain films in addition to traditional film stocks.

Our formula develops 16 rolls or 100ft of 16/35mm film. Just add water! Makes 1 liter of reusable stock solution or 2 liters of 1+1 single-use dilution developer for the traditional 2-bath B&W process. Processing times for D96 should start around 6-8 min. Finish processing your film in under ten minutes when you also use our F96 Rapid Fixer powder!
